

REPEAT RATE & STYLE OF SALE

How often DiggerLid customers come back, what changes when grease or PRO Mat is isolated, which Ecommerce Equation band the business sits in, and why our sales run on a Hybrid curve anyway.

KEEP WORKING & KEEP EARNING!

LOW REPEAT, ON THE HYBRID LINE

CLASSIFICATION: DiggerLid is a **LOW-REPEAT** store that sits on the boundary of **HYBRID**. 17.7% of all customers have ever bought twice; on the last-12-month returning-customer measure it is 21.4%. Grease is the only thing that gets us to the line. Remove it and we are Low with no ambiguity. PRO Mat on its own is deep Low.

Ecommerce Equation "Style of Sale" bands with DiggerLid's measured repeat rates. Repeat rate = share of customers who have purchased more than once. Cohort shares are the EE member distribution shown on the slide.

WHAT EACH NUMBER MEANS

QUESTION	REPEAT RATE	EE BAND	READ
Whole store, last 12 months	21.4%	Hybrid (bottom edge)	The like-for-like number EE peers quote
Whole store, lifetime (every customer since 2019)	17.7%	Low	Dragged down by the 88% of last year's customers who are under 12 months old
Without grease, last 12 months	16.4%	Low	Durables only: covers, enclosure, DiggerShield, PRO Mat, accessories
Without grease, lifetime	13.9%	Low	
PRO Mat buyers acquired since launch, any second order	7.7%	Low	Below the store's same-age average (10.5%)
PRO Mat-first customers who bought anything again	4.8%	Low	Pure acquisition product

WHY IT MATTERS

In EE terms a Low-repeat store wins on first-order economics: average order value, first-order gross profit after marketing, and immediate payback of acquisition cost. That matches our cohort finding that 12-month lifetime value is roughly the first order. Grease is the single retention lever with any mass. Our sales, however, behave like a Hybrid store's sales (section 5), which changes how we should forecast them but not which levers we pull.

2 · WHAT IS OUR REPEAT RATE?

21.4% IN THE LAST 12 MONTHS · 17.7% LIFETIME

Repeat rate here is the Ecommerce Equation definition: the share of customers who have placed more than one order. It is measured directly from Shopify's customer records, so there is no sampling or export involved.

27,061

Customers ever

4,790

Bought more than once
(17.7%)

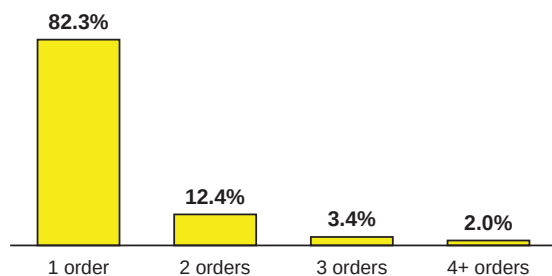

14,552

Customers, Sep 2025 to
Aug 2026

3,112

Of them returning (21.4%)

HOW MANY TIMES CUSTOMERS ORDER

Share of all 27,061 customers by lifetime order count. 5.3% have ordered three or more times.

WHAT RETURNING CUSTOMERS ARE WORTH

	LIFETIME	LAST 12 MO
Share of orders from returning customers	21.1%	23.6%
Share of net revenue from returning customers	19.6%	24.0%
Returning orders per returning customer	1.51	1.27

Roughly one dollar in four comes from someone who has bought before. That is stable across both windows.

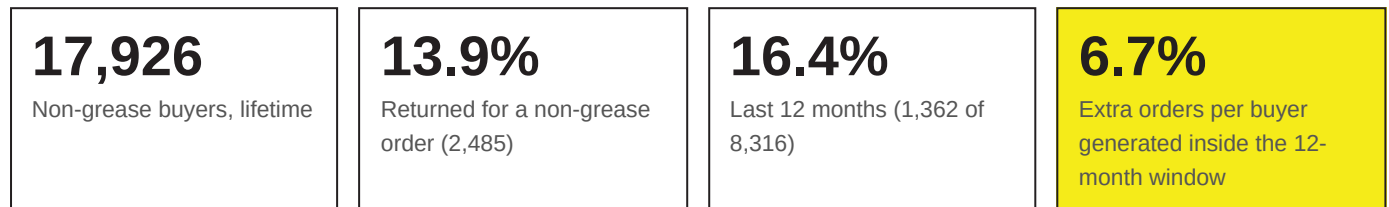

READING THE TWO NUMBERS TOGETHER

The lifetime figure (17.7%) is the honest all-time count, but it is depressed by growth: 12,745 of last year's 14,552 customers were first-time buyers and most have not had time to come back. The 12-month figure (21.4%) is Shopify's returning-customer rate, which is what most EE members read off their dashboard, so it is the fair comparison. Either way the store lives within a few points of the Low/Hybrid line.

3 · WHAT IS IT WITHOUT GREASE?

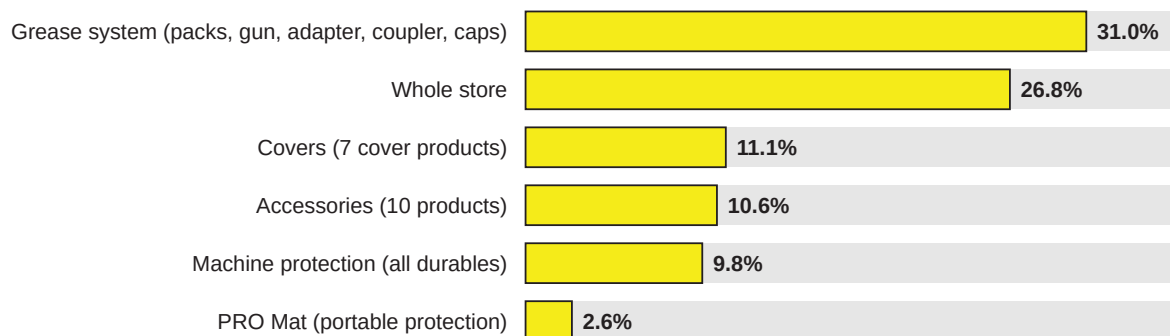

16.4% LAST 12 MONTHS · 13.9% LIFETIME · LOW, UNAMBIGUOUSLY

Same definition, with the grease system (packs, gun, battery adapter, coupler, coupling caps) and free gifts removed from every order. What is left is the machine-protection and accessories business.

Grease adds four to five points of repeat rate and is the only reason the blended store reaches the Hybrid line. Within the last 12 months alone, non-grease buyers produced just 6.7% additional orders; most of the 16.4% is older customers coming back for a second machine or an accessory, not a reorder cycle.

REPEAT BY PRODUCT SET (ALL TIME, EXTRA ORDERS PER BUYER)

Distinct orders containing the set ÷ distinct buyers of the set, minus one. This is the closest live measure of repeat at product level and an upper bound on the share of buyers with two or more orders of that set.

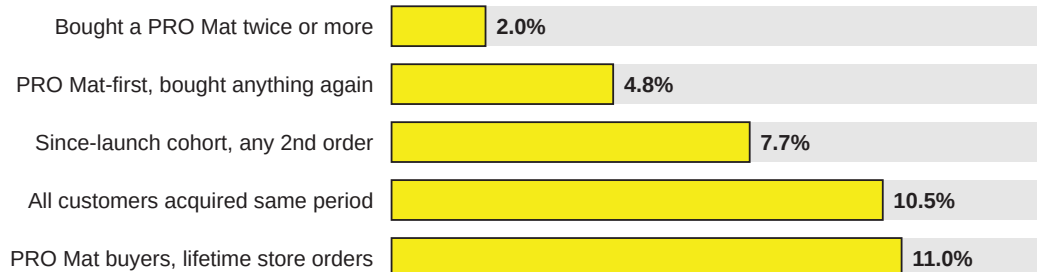

OUTLIERS WORTH KNOWING

- **Reorderers switch variant.** Grease Packs repeat at 26.8% as a product but no single variant exceeds 15% (LZR2 13.7%, LC002 10.3%, HD800 8.1%). Second orders change size or grade. The 40-piece packs are the stickiest variants (14 to 15%). Hammer Paste: 0% repeat across 93 buyers.
- **The battery adapter's 8.4% is a second-platform effect.** Milwaukee 7.1%, Makita 3.1%, DeWALT 0.9%: people buy a second adapter for another battery system, not a replacement.
- **Cheap and universal covers repeat like fleet buyers.** Universal covers 9.3% and Quicky 7.2% at product level versus 2% for the premium 1.7-tonne cover: extra machines, not replacements.

4 · WHAT IS IT FOR PRO MAT CUSTOMERS ONLY?

2.0% TO 11.0% DEPENDING ON THE CUT · DEEP LOW

PRO Mat has been on sale since 25 August 2025. Every fair cut of its 3,168 buyers lands well inside the Low band, and the like-for-like comparison (7.7%) is below the store's same-age average (10.5%). The one number above 10% is padded by older customers' orders placed before PRO Mat existed.

Share of customers with two or more orders under each definition. Source: Shopify customer records filtered to PRO Mat purchasers.

93.5%

PRO Mat buyers who were new to DiggerLid on that order (2,962 of 3,168)

206

Existing customers who added a PRO Mat later

64

Bought a mat on first order and again later

77

Came back for something other than a mat

WHAT PRO MAT IS

It is the purest acquisition product in the range: more than nine in ten buyers meet the brand through it. Once bought it is one-and-done, with roughly 2% buying another mat and 5% buying anything else within its first 13 months. There is no retention layer to invest in. The only repeat path is a post-purchase cross-sell into the grease system, which is where the store's repeat behaviour actually lives.

Run PRO Mat entirely on first-order economics: average order value through the PLUS and colour mix and bundles, gross profit after marketing at the first order, acquisition cost paid back on day one.

LOW REPEAT, BORDERLINE HYBRID

The Ecommerce Equation splits stores into three styles of sale by repeat rate. Most members sit in Hybrid; a quarter are Low repeat.

	LOW REPEAT	HYBRID	HIGH REPEAT
Repeat rate band	0 to 19%	20 to 39%	40%+
Share of EE cohort	25%	48%	27%
DiggerLid, whole store	17.7% (lifetime)	21.4% (last 12 mo)	
DiggerLid without grease	13.9% (lifetime) · 16.4% (12 mo)		
PRO Mat customers only	4.8% to 7.7%		
Grease system, extra orders per buyer	31.0%		

HOW TO USE THE CLASSIFICATION

You would tick Hybrid on the form (12-month returning-customer rate 21.4%) but you should **run the business as Low repeat**. The margin is a few points and it is entirely grease.

Low-repeat levers: first-order AOV (bundles, PLUS mix, percentage-plus-gift offers rather than flat dollars), first-order gross profit after marketing, acquisition efficiency measured on first-order payback, conversion rate and revenue per visitor.

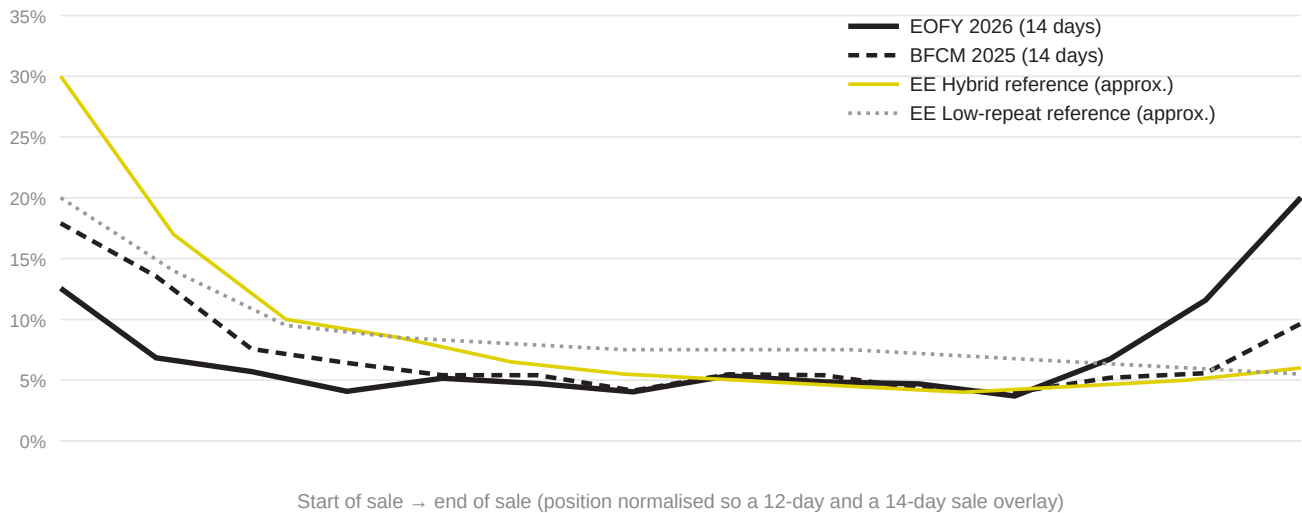

The one Hybrid lever: grease reorder. Roughly one in four grease-pack buyers reorders, and bulk (40-piece) buyers are the stickiest. A restock reminder at around 90 days, a bulk-size nudge, or a subscription is the only retention programme with enough customers behind it to move the store-level number. Crossing 25% on the 12-month measure would make the Hybrid label genuine.

Do not build retention programmes for durables. Covers, enclosures, DiggerShield and PRO Mat repeat at 2 to 11% and the repeat that exists is multi-machine owners, not loyalty.

Method note: repeat rates use Shopify's new-versus-returning order flag and the customers dataset (orders per customer), both exact. Product-set figures use distinct orders ÷ distinct buyers and are upper bounds. Free gifts and package protection are excluded from product tables. About 3,000 buyers sit under legacy product titles and are unattributed at product level.

HYBRID-SHAPED SALES ON A LOW-REPEAT BASE

Our two big sales do not look like the Low-repeat curve. The mid-sale plateau sits at about 5% of sale revenue per day in both, which is the Hybrid signature (Low-repeat stores run a flat 8 to 9%). Each sale concentrates about 30% of its revenue into one 48-hour spike; BFCM puts it at the launch, EOFY puts it at the June 30 tax deadline.

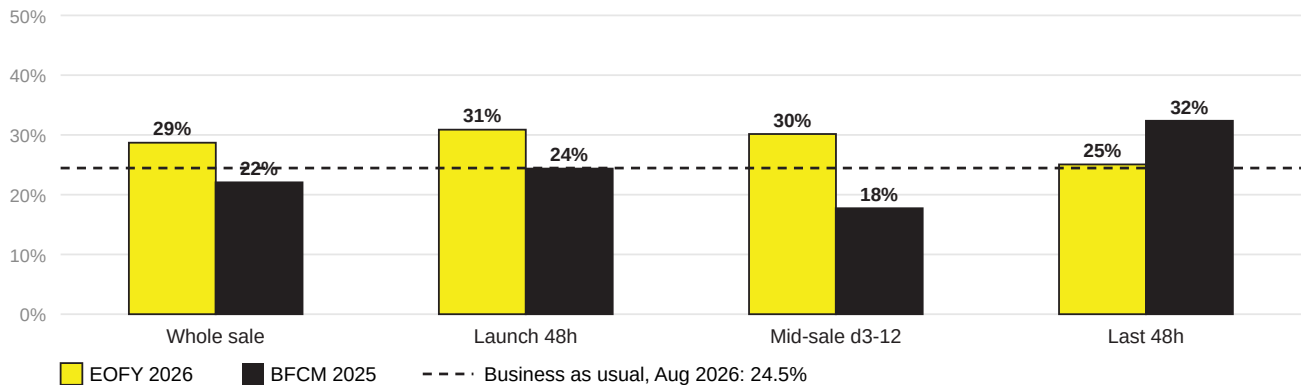

Share of total sale net revenue by day. EOFY 2026: 17 to 30 June, \$543,385. BFCM 2025: 18 November to 1 December, \$534,584. EE reference curves are traced from the Style of Sale slides and are approximate.

PHASE	EOFY 2026	BFCM 2025	EE LOW	EE HYBRID
Launch 48 hours	19.4%	31.4%	~25%	~35%
Mid-sale plateau, per day (days 3 to 12)	4.9%	5.3%	8 to 9%	~5%
Last 48 hours	31.6%	15.2%	~10%	~10%

WHO BUYS AT THE SPIKES

In the EE model a Hybrid or High-repeat sale spikes because the loyal base buys the moment the sale opens. That is not what happens here. The returning-customer share of revenue during both sales is the same as an ordinary month, and the peak days are 70 to 74% new customers. The spike is urgency acting on acquisition traffic (paid social plus email reach), not the base coming back.

Returning-customer share of net revenue by sale phase, against the August 2026 business-as-usual month.

WHAT IT MEANS

- **Forecast with the Hybrid curve.** About 30% of sale revenue in the first 48 hours, roughly 5% per day through the middle, 10 to 15% in the last 48 hours when Cyber Monday closes it. On a \$605k November that is about \$180k for the launch weekend and \$30k a day on the plateau.
- **Pull Low-repeat levers.** Launch-day buyers are 70% new, so launch creative and paid budget are acquisition plays. Do not starve prospecting on day one to protect retargeting.
- **The plateau is the upside.** The Knock-Off 3:30 daily-drop mechanic is a plateau-lifter; measure it against the 5% per day baseline.

WHY EOFY AND BFCM ARE MIRROR IMAGES

The urgency sits at opposite ends. BFCM's urgency is the launch itself. EOFY's is an external deadline, so customers wait: the last day alone did \$109k on 356 orders, 74% of them new. Same total, same plateau, opposite skew. Plan BFCM to front-load spend and stock; plan EOFY to back-load them.

EMAIL MOVES WHO BUYS

Segmented sends to the engaged base lifted returning share to 43% on Cyber Monday and 42% on EOFY day nine. Full-database blasts did not move it. One engaged-segment send mid-sale and one at close are worth more than another blast to everyone.

Caveats: two sales only, 14-day windows against EE's 12-day reference (positions are normalised in the chart). Launch-day share depends on launch hour; both launched early afternoon. Black Friday itself shows 18 returning orders netting to \$411 (refunds), treated as noise.

SOURCE DATA

The full appendix is shipped alongside this report as `repeat-rate-style-of-sale-DATA.md` (Markdown tables plus the ShopifyQL used). It is reproduced here in full for completeness.
