

Marketing Team Framework — Review Summary

Date: 2026-04-02 | **Source:** three-man-team by russelleNVy | **PR:** MJB1000/CLAUDE-CODE-V1#1

Framework Overview

Three AI agents with structured file-based handoffs:

Role	Job	Flow
Strategist (Sofia)	Plans campaigns, writes briefs, owns launch gate	Brief →
Copywriter (Charlie)	Writes content from briefs	→ Draft →
Designer (Dana)	Brand guardian, quality gate	→ Review → Launch

Creative Director (you) makes brand/business decisions. Strategist manages everything else.

Core principle: Handoffs through files, not conversation. Each agent reads only what it needs. Token waste is structural — fix the structure, fix the behavior.

Simulation: SaaS Landing Page for Mid-Market CFOs

Product: Clarifi Analytics (AI-powered analytics) **Deliverable:** Landing page — headline, 3 value props, CTA, social proof

Sprint Flow

Step	Who	What Happened
1	Sofia	Wrote brief with 4 flags (no real quotes, exact spelling, no AI hype, no unapproved ROI claims)
2	Charlie	Submitted plan — lead with CFO pain, not product. Mixed social proof format. Sofia approved.
3	Charlie	Wrote draft: "Stop chasing the numbers. Start acting on them." + 3 value props + CTA
4	Dana	Round 1 — 2 Must Fix, 2 Should Fix, 1 Escalation
5	Charlie	Fixed all 4 items in one pass
6	Dana	Round 2 — All clear.
7	Sofia	Logged to Campaign Log. Checkpoint written. Awaiting CD sign-off.

What Dana Caught

Severity	Issue	Resolution
Must Fix	"3x more forecast accuracy" — not a coherent metric	Rewritten to qualitative language with [SOURCE NEEDED]
Must Fix	"without adding headcount" — drift from brief (brief says speed-to-insight, not cost)	Removed. Replaced with brief-aligned messaging
Should Fix	Placeholder quote had specific fabricated numbers — could be mistaken for real data	Replaced with clearly templated placeholder
Should Fix	CTA title case inconsistency	Flagged for brand guide decision

Severity	Issue	Resolution
Escalate	"See Clarifi With Your Data" implies personalized demo — does sales team deliver that?	Deferred to CD. CTA changed to "Book a Demo"

Simulation Verdict

The framework works. The handoff chain produced a credible landing page that improved across two review rounds. Brief Flags prevented 3 errors before any copy was written. The feedback severity system (Must Fix / Should Fix / Escalate) separated cleanly.

10 Issues Found & Fixed

Must Fix (framework broke without these)

#	Problem	Fix
1	No re-submission flow after Must Fix	Added 4-step re-submission process to Copywriter role
2	Escalation path had no file flow	Added Handling Escalations section to Strategist role
3	Copywriter Plan lost when brief is overwritten	Plans now logged to Campaign Log for preservation

Should Fix (recurring friction)

#	Problem	Fix
4	No deliverable file naming convention	Added <code>deliverables/01-name.md</code> convention to CLAUDE.md
5	No DoD self-check in review request	Added self-check section to Review Request template
6	No Copywriter Plan template	Added Approach / Decisions / Uncertainties format
7	No guidance on publishing with [SOURCE NEEDED] tags	Added publish-with-gaps section to launch gate
8	Known Gaps just accumulate, never close	Added Status / Resolved columns
9	Re-review covers already-cleared sections	Added Locked Sections concept to Review Feedback
10	No way to dispute a Must Fix	Added escalation path for disputed items

Context7 Evaluation

Verdict: Skip for v1.

Factor	Assessment
What it does	Injects live library docs into LLM context via MCP server
Potential benefit	Could keep brand/style knowledge current from central source
Why not now	Built for code docs, not marketing content. Parsing engine indexes APIs, not brand guides.
Token cost	Injects docs into context — conflicts with framework's "skip the read" philosophy
Dependency risk	Adds network latency + third-party service to every reference lookup
Rate limits	Free tier limited; multi-agent framework could hit bottleneck

Revisit when: Context7 supports Notion/Google Docs/Confluence, or team manages 10+ brand assets that change frequently.

Continuous Learning Strategy

Built into the framework now

Mechanism	How It Works
Learned Patterns	Section in Campaign Log. Accumulates what Dana catches and what works. Sofia reads before writing each brief.
Audience Context	New brief field: what the audience already believes, what competitors say, what objections they bring.
Brief Expiry	Briefs older than 14 days must be reconfirmed. Markets change fast.
Checkpoint Compression	200-word limit prevents context bloat while preserving essential state.
Gap Resolution Tracking	Known Gaps now have Status/Resolved columns — they close, not just accumulate.

Recommended for later

Mechanism	What It Does
PLAYBOOK.md	Cross-campaign memory. Audience patterns, review patterns, channel patterns. Survives across projects.
Campaign Retrospective	Post-publish review: what was caught, what worked first time, what the brief should have included.

File Structure (38 files)

marketing-team/	
├─ agents/	# Role definitions
│ └─ STRATEGIST.md	# Plans, briefs, launch gate
│ └─ COPYWRITER.md	# Writes content
│ └─ DESIGNER.md	# Reviews for brand/quality
├─ handoff/	# Inter-agent communication
│ └─ STRATEGY-BRIEF.md	# Strategist → Copywriter
│ └─ REVIEW-REQUEST.md	# Copywriter → Designer
│ └─ REVIEW-FEEDBACK.md	# Designer → Copywriter
│ └─ CAMPAIGN-LOG.md	# Shared record + learned patterns
│ └─ SESSION-CHECKPOINT.md	# State persistence (200-word limit)
├─ templates/	
│ └─ project-folder/	# Named personas (Sofia, Charlie, Dana)
│ └─ generic/	# Blank [CUSTOMIZE] placeholders
├─ examples/	
│ └─ session-start.md	# Copy-paste session prompts
│ └─ campaign-walkthrough.md	# Full sprint example
├─ simulation/	# Stress test outputs (10 files)
├─ CLAUDE.md	# Session router + token rules
├─ METHODOLOGY.md	# Why this works
├─ IMPROVEMENTS.md	# Full analysis + Context7 eval
├─ INSTALL.md	# Setup guide
├─ CHANGELOG.md	# v1.0.0
└─ setup	# Install script

Next Steps

1. **Review this PR** — MJB1000/CLAUDE-CODE-V1#1
2. **Customize personas** — edit Who You Are sections in agents/ or copy from templates/project-folder/
3. **Run a real campaign** — pick a deliverable and spin up the Strategist
4. **Build the Playbook** — after 3-5 deliverables, create PLAYBOOK.md from accumulated Learned Patterns
